Northgate Fasteners — 9 days left

12 of 12 record(s) included. All records. Amounts in USD.

The supplier with the cheapest pieces frequently has the tooling charge. This chart shows how much of each quote is the parts you asked for and how much is everything else that arrives with them. The supplier with the cheapest pieces frequently has the tooling charge. This chart shows how much of each quote is the parts you asked for and how much is everything else that arrives with them.

An order is not delivered until its last line arrives, so the longest line is the honest number. The dashed line is the tolerance set on the Settings tab; a bar above it is a quote you cannot use at the price on the page. An order is not delivered until its last line arrives, so the longest line is the honest number. The dashed line is the tolerance set on the Settings tab; a bar above it is a quote you cannot use at the price on the page.

Landed cost divided by the quantity ordered. Where a supplier has loaded a set-up charge onto a small quantity, this is where the cheap unit price stops being cheap. Landed cost divided by the quantity ordered. Where a supplier has loaded a set-up charge onto a small quantity, this is where the cheap unit price stops being cheap.

The comparison

Notes

Sample comparison — replace every line with your own quotes before relying on it or circulating it. Three suppliers were invited on the same specification, quantities and delivery basis; all three responded within the return date. Northgate quoted the lowest unit price on every line but carries a one-off set-up charge, a 400-piece minimum against a 250 requirement, and a substituted material grade on the drawn item, and finishes highest on landed cost. Halden is recommended for award.

Landed cost here covers the figures you entered — quantity, unit price, one-off tooling or set-up charges and carriage — and nothing else. Import duties, taxes, currency movement between quotation and payment, inspection and rework cost, stock holding, tooling ownership and the cost of a late delivery all sit outside it, and any one of them can decide the real winner. The minimum-order over-buy is shown separately, not folded into landed cost, because whether the extra pieces are a cost or a stock top-up is your judgement, not an arithmetic result. This tool compares the numbers you type; it does not verify that the suppliers quoted the same thing. Nothing here is procurement, tax, customs, legal or financial advice.
